Milestone 4

Creation of Reports and Dashboard (ServiceNow)

Objective: Create a dashboard, build a report from the imported data, and add the report to the dashboard for easy visualization.

Task 1: Create Dashboard

A dashboard is a single page that displays multiple reports and widgets together.

Steps

1. Log in to your ServiceNow instance.
2. In the Filter Navigator, search **Dashboards** (under **Self-Service > Dashboards**) or open **Analytics > Dashboards**.
3. Click **Create** (or **New**) to create a new dashboard.
4. Enter the **Name** (e.g., *Import Data Dashboard*) and select the **Owner** / visibility (for example, all users or specific roles).
5. Choose a layout if asked, then click **Create** / **Save**.
6. The empty dashboard opens and is ready for reports to be added.

Task 2: Create Report 1

Create a report on the target table where the imported data was loaded (for example, Users [sys_user]).

Steps

1. Navigate to **Reports > Create New** (or **Reports > View / Run** and click **Create a report**).
2. Enter the **Report name** (e.g., *Users by Department*).
3. Under **Source type**, select **Table** and choose the **Table** (e.g., *sys_user*).
4. Click **Next** and choose the **Type** of chart, such as **Bar**, **Pie**, **Donut** or **List**.
5. Set the **Group by** field (e.g., *Department*) and the aggregation (e.g., *Count*).
6. (Optional) In the **Filter conditions**, add conditions to show only the required records.
7. Use the **Style** / **Color** tabs to adjust the title, labels and colors.
8. Click **Save**, then click **Run** to preview the report.

Sample Report Details

Field	Example Value
Report name	Users by Department
Table	Users [sys_user]
Chart type	Bar / Pie
Group by	Department
Aggregation	Count

Task 3: Add Report to Dashboard

Steps

1. Open the dashboard created in Task 1 (**Dashboards** > *Import Data Dashboard*).
2. Click **Add widget** (the plus icon) or **Edit** on the dashboard.
3. Select **Report** / **Data visualization** as the widget type.
4. Search and select **Report 1** (*Users by Department*).
5. Click **Add**. The report appears as a widget on the dashboard.
6. Drag and resize the widget to position it as required.
7. Click **Save** (or **Done**) to finish editing.
8. Refresh the dashboard and confirm the report displays the correct data.

Alternative method (from the report)

Open the saved report, click **Save > Publish** or **Add to dashboard**, choose the dashboard, and confirm.

Final Checklist

Check	Status
Dashboard created with a proper name	■
Report 1 created on the correct table	■
Report shows correct data when run	■
Report added to the dashboard	■
Dashboard saved and verified	■

Note: Menu names can differ slightly by ServiceNow release. Replace the example names with those from your project.
